**Segment:** **HL** Hierarchical Level  
**Position:** 010  
**Loop:** HL Mandatory  
**Level:** Detail  
**Usage:** Mandatory  
**Max Use:** 1  
**Purpose:** To identify dependencies among and the content of hierarchically related groups of data segments

**Syntax Notes:****Semantic Notes:**

- Comments:**
- 1** The HL segment is used to identify levels of detail information using a hierarchical structure, such as relating line-item data to shipment data, and packaging data to line-item data.  
The HL segment defines a top-down/left-right ordered structure.
  - 2** HL01 shall contain a unique alphanumeric number for each occurrence of the HL segment in the transaction set. For example, HL01 could be used to indicate the number of occurrences of the HL segment, in which case the value of HL01 would be "1" for the initial HL segment and would be incremented by one in each subsequent HL segment within the transaction.
  - 3** HL02 identifies the hierarchical ID number of the HL segment to which the current HL segment is subordinate.
  - 4** HL03 indicates the context of the series of segments following the current HL segment up to the next occurrence of an HL segment in the transaction. For example, HL03 is used to indicate that subsequent segments in the HL loop form a logical grouping of data referring to shipment, order, or item-level information.
  - 5** HL04 indicates whether or not there are subordinate (or child) HL segments related to the current HL segment.

- Notes:**
- 1. Use this HL loop to identify project organization, personnel, technical data, and budget data associated with the application, budget or professional profile.**
  - 2. The transaction set hierarchy for an application (1/BGN07/020 is code 6A, 6C, 6N, 6R, 6S, S4 or TS) as defined by this HL loop shall be:**
    - a. The Project (PC) loop shall be the first iteration of the HL loop.**
    - b. The Project loop must have at least one Key Person (26) loop to identify the principal investigator. Additional Key Person loops may be included to identify other project personnel as needed.**
    - c. The Project loop may have any number of subordinate Sub-project (SP), Consortium (CO), Human Subject Care Group (4), or Animal Subject (AS) loops.**
    - d. Sub-project and Consortium loops may have any number of subordinate Sub-project, Consortium, Key Person, human subject Care Group, or Animal Subject loops.**
    - e. Key Person loops may have any number of subordinate Other Support (OS) loops.**
    - f. Animal Subject loops may have any number of subordinate Animal Subject loops, but only if the subordinate loop contains a subset of animals of the same species.**

3. The transaction set hierarchy for a budget (1/BGN07/020 is code 07, 65, or FM) as defined by this HL loop shall be:
- The Project (PC) loop shall be the first iteration of the HL loop.
  - The Project loop may contain any number of subordinate Sub-project (SP), Consortium (CO) loops.
  - Any Sub-project and Consortium loops may have any number of additional subordinate Sub-project, Consortium loops.
  - The Project loop (and, if any, subordinate Sub-project or Consortium loops) must consist only of one or more 2/PPL/170 loops.
4. The transaction set hierarchy for a professional profile (1/BGN07/020 is code FG) as defined by this HL loop shall be one or more Key Person loops, with no subordinate loops.
5. The term "project" in the following implementation notes is used generically to identify dates, quantities, etc. related to the Project and subordinate Sub-projects and/or Consortiums. The terms "Project loop", "Sub-project loop", and "Consortium loop" are not interchangeable. They are used to distinguish between the efforts and to establish the precise hierarchical relationship between them.

Code identifying an index

*1. Use code 1 or 2 once per matrix to indicate the start of the matrix. Use multiple iterations as needed citing codes 3 or 4 to define additional cell ranges to be loaded within a single matrix.*

*2. In an absolute reference (codes 1 and 3) use the alphanumeric identifiers (e.g., A1 and E1) in INX02-02 and INX02-03 to identify the range of cells to be loaded.*

*3. In a relative reference (codes 2 and 4), use the alphanumeric identifier, e.g., B3, in INX02-02 to identify the specific cell to start at and in INX02-03, provide a count of cells to load starting from that location.*

**4. Example of an absolute load pattern loading 15 cells (A1..E1, A2..E2, A3..E3): INX\*1\*1:A1:E3@**

**5. Example of a relative load pattern that starts at cell B3 and loads 3 cells top to bottom: INX\*2\*3:B3:3@**

1. When HL03 is code PC (Project loop), SP (Sub-project loop) or CO (Consortium loop), use of this segment is **REQUIRED** to provide project total price. Use a single iteration of this PPL loop and within it a single iteration of the 2/PD/190 loop to provide this project total price.

2. When detailed budget data is being provided in this transaction set, use subsequent iterations of the PPL loop to identify each budget period (e.g., a project with a planned duration of 2 budget periods would utilize 3 iterations of the PPL loop). Use the 2/PD/190 loop to provide costs for specific budget categories (salaries, equipment, etc.).
